Open Source and Agility

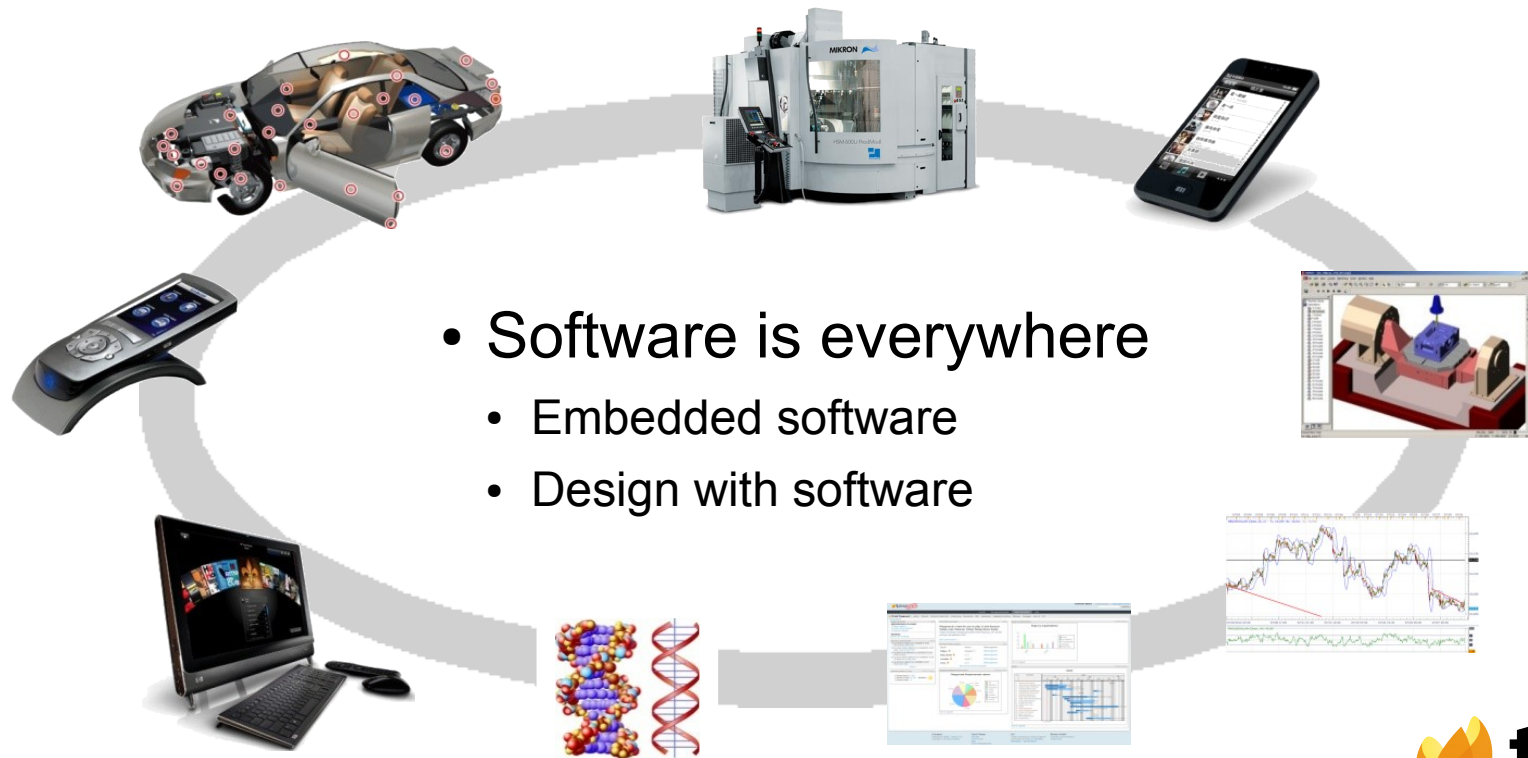

Innovate and develop more efficiently with
Open Source AND Agile approach

Experience of the development of **Tuleap open ALM**

laurent.charles@enalean.com

Enalean business context

- The High tech industry

Enalean develops Tuleap

- **Our mission**
 - Bring **industrialization of software** to our customers in order for them to **produce more software value**
 - With **Tuleap open ALM™**
- **Tuleap open ALM™**
 - 100% libre and open source software
 - <http://tuleap.net>
- **Enalean challenges**
 - Business model with libre and open source software
 - Long term partnership with customers
 - Bring continuous improvements to the customer

Open Forge?

- What is **Open Forge** for us?
 - Open the door to the future
 - Go to the future with our partners (customers and community)
- Our choice
 - Software vendor strategy
 - Product and Service based on Libre and Open Source products
 - Agile approaches
 - Iterations Regular delivery of value
 - High involvement of customers
 - Transparency
 - No fork
 - All developments and contributions are part of the product

- 100% software vendor
- 100% libre and free software
- 100% agile
- 100% sustainable development

Working mode

Principle:

- Governance in contract, not production

We do not know exactly what we will do,
but we bring ourselves the best possible
conditions to achieve it

Trust and confidence in a commercial relationship

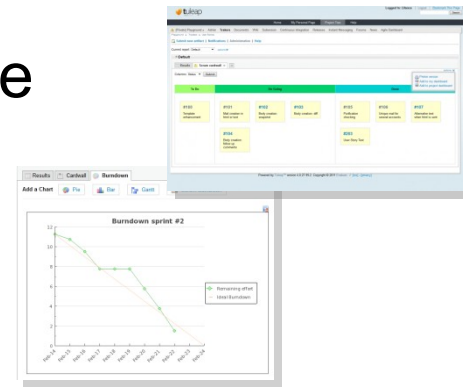

How does it work?

1. The customer knows and accepts this working mode

- 100% transparent

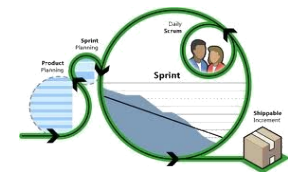

2. The customer subscribes to development capacity

- Pool of Story Points
- Governance
 - Decision of what to do
 - Integration community contribs & OSS software

3. The customer is committed

- Interlocutor. Represent users
- Available

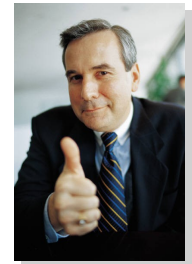

4. Development & Integration

- Continuous delivery + Feedback
- Push in production => Delivered value

Does it work?

- Satisfaction for us (Enalean)
 - Predictable
 - Generate revenues
- Satisfaction of customers
 - Continuous delivery of value
 - Addressing real requirements
 - Focus on most important points
 - Mutualization of developments & maintenance
- Satisfaction of the community
 - 100% available - Libre and Open Source
 - Integration of contributions
